

PROJECT PROPOSAL

Group 08 - 23CLC05

1. Introduction

Melody Dive is a music streaming website that helps users search for and listen to songs. It also includes various features, such as allowing users to like and save their favorite tracks, share songs with others, etc. Our group chose this project because we are all music lovers who understand what users truly need in a music website. We aim to create an enjoyable listening experience for everyone.

2. Target users

The primary target users for **Melody Dive** are **Frequent Music Listeners** (Daily Listeners) who are looking for a free music streaming platform that is not compromised by existing negative experiences. This group is already familiar with the basic functionalities of music platforms but seeks an experience that allows them to immerse themselves seamlessly in the melodies, notes, and stories without being forced to endure intrusive ads.

3. Environment

As a web application, it supports HTML5/CSS3 and offers cross-browser compatibility (Chrome, Edge, Firefox) with a responsive interface for both desktop and mobile use. The system is hosted locally, ensuring fast access during development and allowing seamless testing and debugging in a controlled environment.

4. Features

- **Play music:** Play songs, and allow users to jump to any time of the song.
- **Provide lyrics:** Every song includes its full lyrics so that users can read and understand the song.
- **Groups of songs:** There are albums and categories of songs specified by their genre, language, etc.
- **Searching:** Users can search for songs, and can refine search results using filters such as genre, composer, and more.
- **[AI feature] Semantic search:** Allow users to type in casual, or even ambiguous phrases to search for the song. Eg: Search: “yeu dc ko duc phuc” → Result: “Yêu được không - Đức Phúc”.

- **Favourites and Collections:** Users can save their favourite songs and organize them into personal playlists. However, the number of saved songs is limited for regular accounts.
- **Premium account:** To maintain the premium account, users have to pay every month. It allows users to: listen to premium songs, and save unlimited songs to personal playlists.
- **Playback control:** Let users manage the playing order (organize the songs order) and play modes (repeat once, repeat forever, play in order).
- **Show trending songs:** show the songs which have been most listened to recently.
- **Search history:** Save users' recent search history for quick access.
- **Comment:** Users can comment on songs.
- **Report:** Users can report toxic, inappropriate comments/songs, so that admins can delete them and ban the offending users.
- **Ban users & Delete:** This feature is for admins. As mentioned above, admins can delete inappropriate comments/songs, and have the authority to ban toxic users.
- **Download:** Users can download songs from the website.
- **Account management:** Allow users to create accounts with linked information (e.g. email, phone number), log in, and reset passwords.
