Use-Case Specification: Ban users

1. Use-Case Name: Ban users

1.1 Brief Description

This use-case describes how admins ban users due to their toxic/inappropriate comments.

2. Flow of Events

2.1 Basic Flow

1. The admin selects a report in the *comment reports list* and selects **Review**

Reports

Manage user reports about inappropriate content

2. The admin now can see the comment and the user who posted it.

Melody Dive	Version: 1.0
Use-Case Specification: Ban users	Date: 15/11/2025
UC Ban users	

3. The admin selects **Ban user** to ban the user who posted the comment.
4. The system checks if that user account still exists.
5. If the account still exists, the system removes that account from the platform.
6. A message will display to show that the account has been removed successfully.

2.2 Alternative Flows

2.2.1 The account does not exist.

This flow occurs after step 4 in the Main flow when the system checks and gets that the account does not exist, which can be because the user has deleted the account or another admin has banned it.

In this flow, a message saying “The account does not exist” will display.

2.2.2 The report has been processed.

This flow happens after step 3, when this report has already been processed by another admin, but the current admin has not refreshed the report to see the update.

In this flow, a message saying “The report has already been processed.” will display, and the current user takes no action.

3. Special Requirements

3.1 Account removing time

The system must take at most 5 seconds to remove a user account.

Melody Dive	Version: 1.0
Use-Case Specification: Ban users	Date: 15/11/2025
UC Ban users	

4. Preconditions

4.1 Admin account logged in

The admin must have logged in an **Admin** account.

4.2 The admin has accessed the “Manage reports” section

Before starting step 1 in the Main flow, the admin has already gone to the **Manage reports** section to view all reports.

5. Postconditions

5.1 The account is banned successfully

The user account is successfully removed from the system.

5.2 Show notification when the action is not activated

In some cases when the action can not be activated (as mentioned in **Alternative flows**), a message displays.
