Use-Case Specification: Comment

1. Use-Case Name: Comment

1.1 Brief Description

This use case allows the user to view detailed metadata of specific songs (such as title, artist, genre and duration) and interact with the community by viewing, posting and reacting to comments.

2. Flow of Events

2.1 Basic Flow

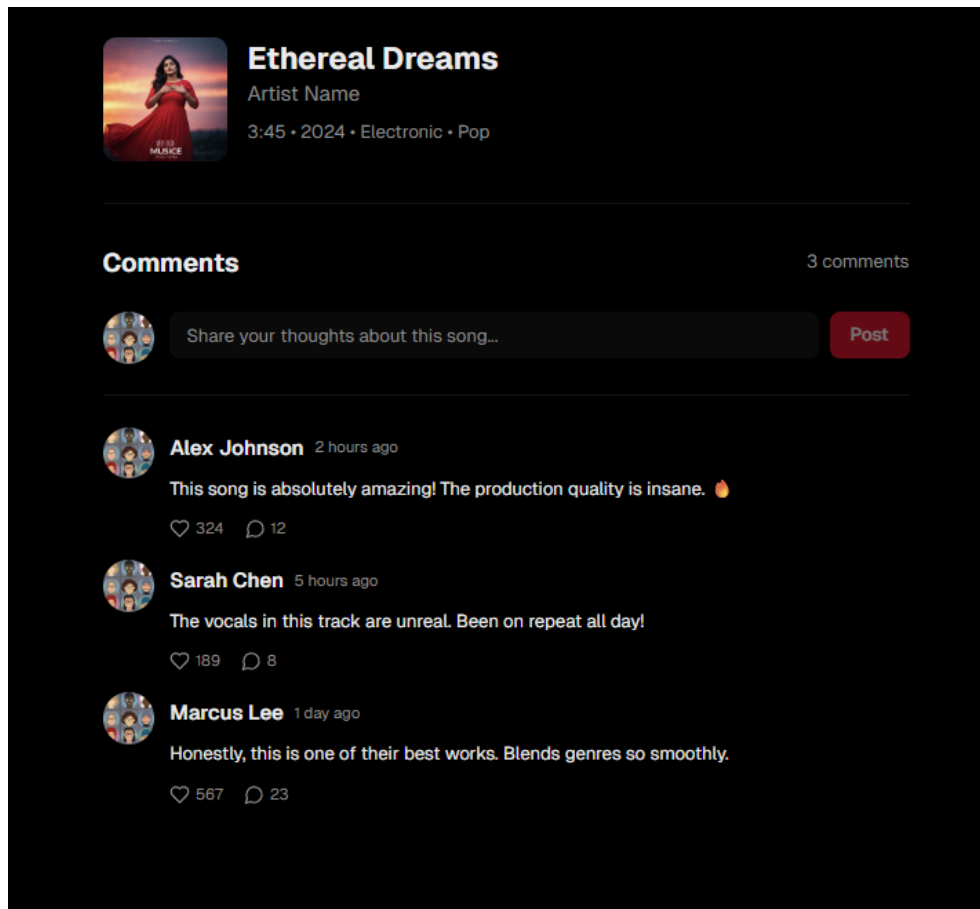

Figure 1: The interface of comment section

1. When playing a song, the system displays the Song details page (including the Album Art, Song Title, Artist Name, Duration, Release Year and Genre).
2. The system retrieves and displays the Comments section, showing the total comment count.
3. The system lists existing comments from other users, including their Avatar, Name, Timestamp, Content, Like Count, and Reply Count.
4. The user clicks on the input field with the placeholder text “Share your thoughts about this song...”.
5. The user enters the comment text.
6. The user clicks the “Post” Button.
7. The system validates that the input is not empty and save it.
8. The system refreshes the comment list to display new comments at the top (or according to the sort

UC Comment	

- order) and increments the total comment count.
9. The system clears the input field.

2.2 Alternative Flows

2.2.1 Posting an empty comment

In step 6 of the Basic Flow, if the User clicks “Post” without entering text or entering only whitespace:

- The system disables the “Post” action or displays a warning message indicating that the comment cannot be empty.
- The flow returns to Step 4.

2.2.2 Failure to Load Comments

In step 2 of the Basic Flow, if the system fails to retrieve comments due to a network error:

- The system displays the “Song details” but to show an error message in the Comments section (Example: Failed to load comments,).
- The system may provide a “Retry” button.

3. Special Requirements

3.1 User Identification

The current user’s avatar must be displayed to the left of the input field to indicate which account is about to post.

3.2 Responsiveness

The “Post” button should provide visual feedback (Example: color change or spinner) immediately after being clicked to prevent double submissions.

4. Preconditions

4.1 User Logged In

The system must recognize the currently logged-in user to display their avatar and enable the input field.

4.2 Song Availability

The selected song must exist in the database and be available for display.

5. Postconditions

5.1 Database Update

A new record is created in the “Comments” table link with user, song, time and content.

5.2 Interface State

The comment count is incremented, and the user’s comment is visible in the list.

6. Extension Points

6.1 Like Comment

- Location: Step 3 of the Basic Flow.
- Description: The user can click the Heart Icon below a specific comment. The system increments the like count and highlights the icon to indicate the interaction.

6.2 Reply to Comment

- Location: Step 3 of the Basic Flow
- Description: The user clicks the Speech Bubble icon (Reply) below a specific comment. The system reveals a nested input field or navigates to a thread view to allow the user to reply specifically to that comment.
