Use-Case Specification: Report Content

1. Use-Case Name: Report Content

1.1 Brief Description

This use case allows a user to report inappropriate, offensive, or incorrect content within the app, such as a comment, song, playlist, album, or lyrics. The system collects the report details, optionally asks for a reason, and sends it to the moderation system for review. The process does not interrupt playback or other app functionalities.

2. Flow of Events

2.1 Basic Flow

1. System displays the content detail page (comments, song, playlist, album, or lyrics).
2. User taps the “Report” button associated with the content.
3. System opens the report form, showing report categories or reasons (e.g., inappropriate, offensive, copyright issue).

UC ReportContent	

4. User selects a reason and optionally adds a description or comment.
5. User submits the report.
6. System confirms that the report has been received, displaying a success message.
7. Flow ends when the user closes the confirmation or navigates away.

2.2 Alternative Flows

2.2.1 User cancel reports

- This alt flow occurs at step 4.
- User taps “Cancel” instead of submitting.
- System closes the form without sending any data.
- User returns to the content page.

2.2.2 Submission Error

- This alt flow occurs at step 5
- System fails to send the report due to server error.
- System displays an error message and allows the user to retry submission.

3. Special Requirements

3.1 Non-Interruptive Operation

Reporting content must not interrupt ongoing playback or other app activities.

3.2 Reason Selection Mandatory

The system must enforce selection of a reason category before submission.

3.3 Optional Description Field

Users may optionally provide additional details or comments when reporting content.

3.4 Confirmation Feedback

The system must display a clear confirmation message after a successful report.

3.5 Accessibility Compliance

The report form must be accessible, with properly labeled inputs and controls for all users.

4. Preconditions

4.1 User Access

The user must be logged in and have access to the content they want to report.

4.2 Content Availability

The content (song, playlist, album, or lyrics) must exist and be viewable in the app.

4.3 Report Form Access

The system must have a functional report form ready to capture user input.

5. Postconditions

5.1 Report Submitted

The user’s report has been successfully sent to the moderation system.

5.2 Confirmation Displayed

The system displays a confirmation message acknowledging receipt of the report.

5.3 No Playback Interruption

Any ongoing audio playback continues without interruption.

6. Extension Points

6.1 Attach Screenshot

- Location in the basic flow: step 4.
- Triggered when the user wants to include an image or screenshot to support the report.
- The system allows uploading or capturing an image and attaches it to the report submission.

6.2 Anonymous Report

- Location in the basic flow: step 4.
- Triggered when the user chooses to report content without revealing their identity.
- The system hides user information from the moderation system while still submitting the report.

6.3 Pre-Fill Context Data

- Location in the basic flow: step 3.
- Triggered when the system automatically includes metadata about the content (title, creator, URL) in the report form.
- This ensures moderators have full context for the report.
