Use-Case Specification: Play Premium Songs

1. Use-Case Name: Play Premium Songs

1.1 Brief Description

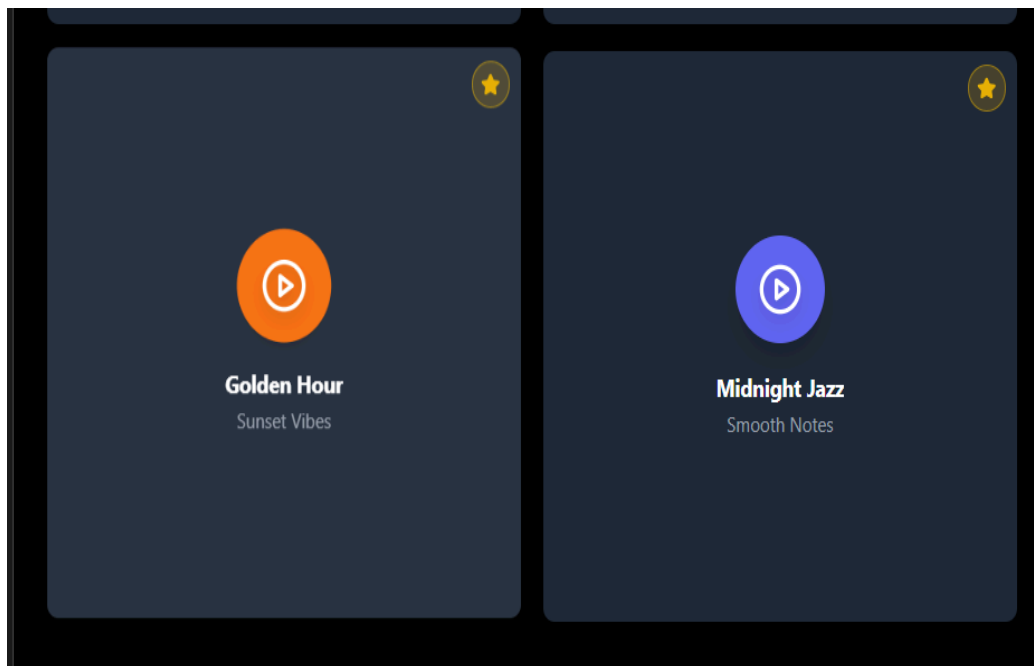

This use case describes the process by which the system validates user access rights to exclusive musical content. Its primary purpose is to ensure that only accounts with a valid Premium subscription can stream restricted songs, thereby enforcing user authorization policies and maintaining the commercial value of paid content on the platform.

2. Flow of Events

2.1 Basic Flow

This use case starts when the user wishes to listen to a song only for premium users.

1. The user navigates to a content list (playlist, album, or artist page), selects a song marked with a "Premium" label, and clicks the "Play" button.

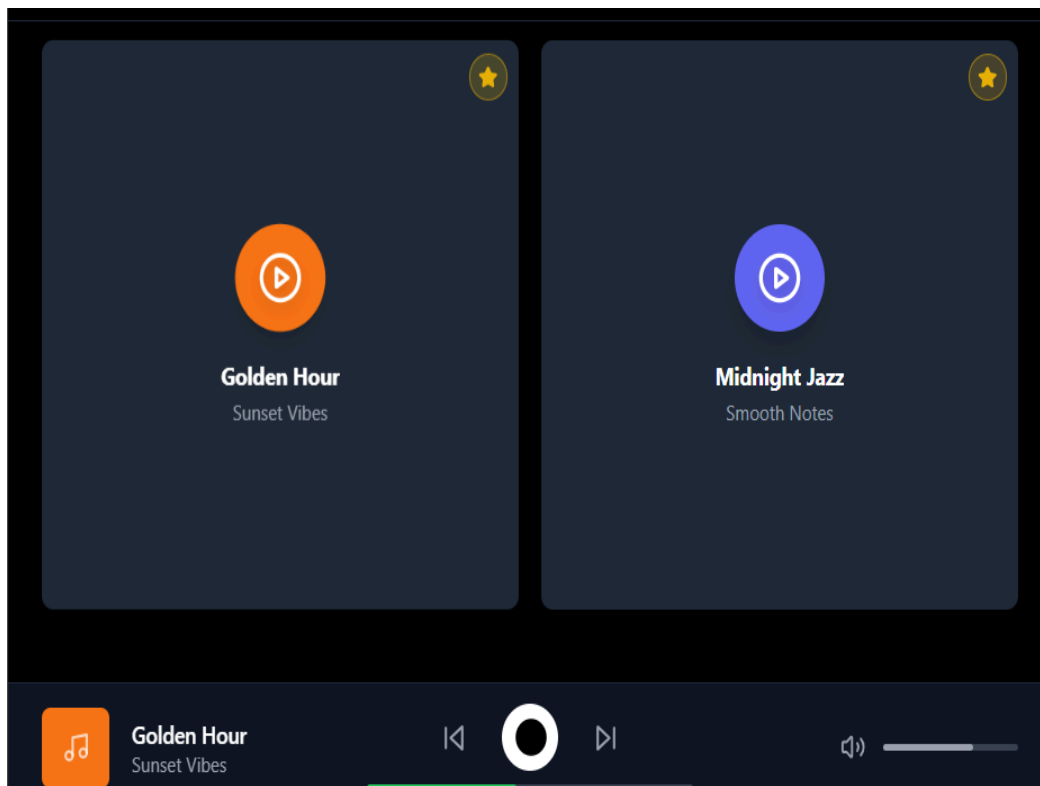

2. The system receives the request and retrieves the current Subscription Status associated with the user's account.

3. The system verifies that the Subscription Status is "Active Premium."

4. The system grants access to the selected premium song.

5. The system plays the audio for the user.

2.2 Alternative Flows

2.2.1 User does not have a valid Premium Subscription

This alternative flow begins at step 3 of the Basic Flow if the System determines the Subscription Status is not "Active Premium" (e.g., it is "Free" or "Expired").

1. The system denies the request to access the premium song.
2. The system displays a notification to the user stating that the selected content is restricted to Premium subscribers only.
3. The use case ends.

3. Special Requirements

3.1 Performance Requirement

The system must validate the User's subscription status and initiate the audio playback within **3 seconds** of the Actor clicking the "Play" button, assuming a standard broadband internet connection.

3.2 Security Requirement

The audio stream source URL generated by the System must be encrypted or time-limited (token-based) to prevent the Actor from copying the direct link and sharing it with non-premium users outside the application context.

4. Preconditions

4.1 User account logged in

The user must have logged in their account.

4.2 Content is Displayed

The System is currently displaying a page (e.g., Playlist, Album, or Search Results) containing the specific song marked as "Premium".

UC Play Premium Songs	

5. Postconditions

5.1 Playback Started (Success)

The system is actively streaming the audio content to the user, and the user interface indicates the "Playing" state (e.g., the pause button is visible, and the progress bar is moving).

5.2 Access Denied (Alternative)

The system remains in its previous state (no audio is streamed), and the user interface displays a notification indicating that the content is restricted.

6. Extension Points

None
