Use-Case Specification: Delete content

1. Use-Case Name: Delete content

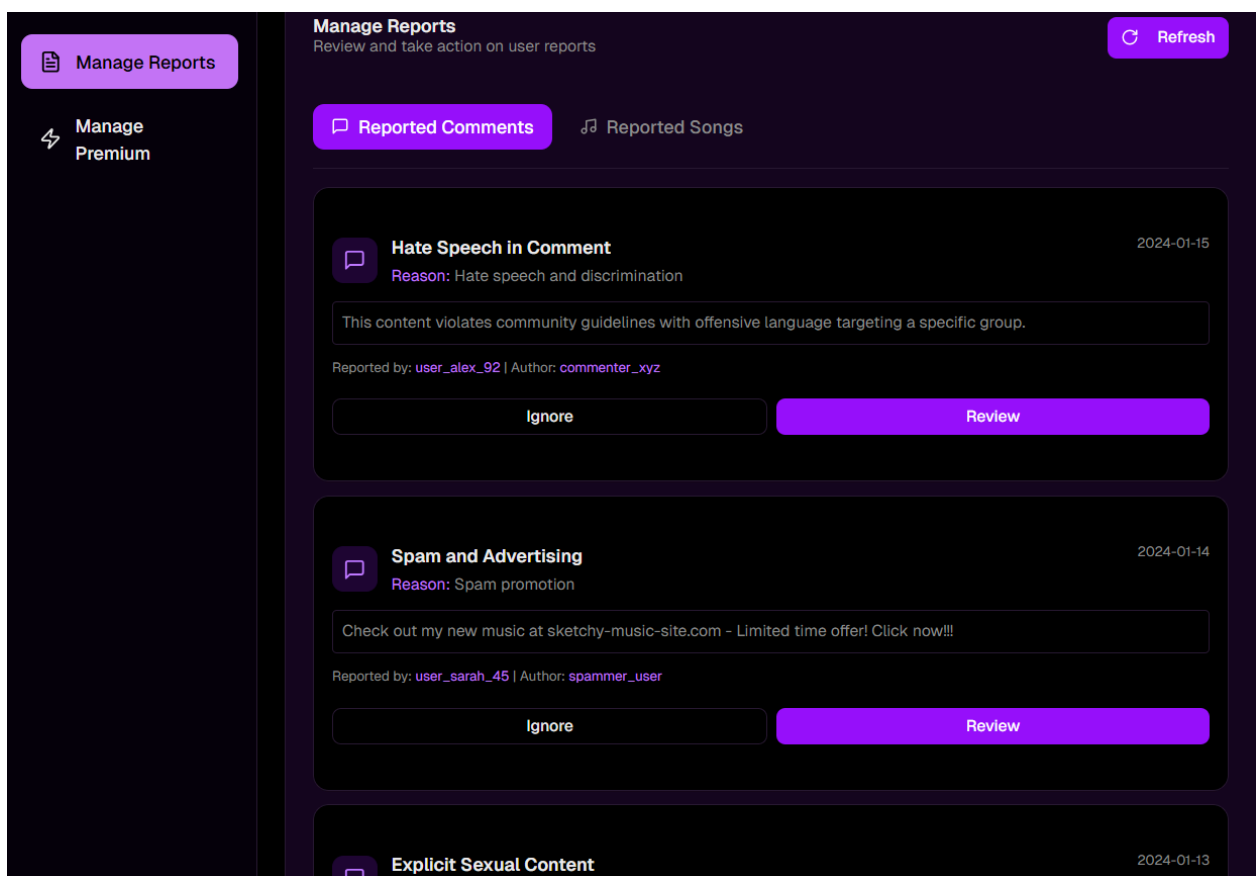

1.1 Brief Description

This use-case describes how admins delete toxic/inappropriate comments or songs which have been reported.

2. Flow of Events

2.1 Basic Flow

1. The admin selects a report in the reports lists and selects **Review**.

2. The admin now can see its content (can be the comment or the song).

Delete Content

Ban User

- The admin selects **Delete content** to delete the content.
- The system checks if the content still exists.
- If the content still exists, the system removes it from the platform.
- A message saying “The content has been deleted successfully” will be displayed.

2.2 Alternative Flows

2.2.1 Content does not exist

This flow starts right after the step 4 in Basic Flow when the system checks and gets that the content does not exist – another admin may have deleted it earlier, or the user has deleted it. In this flow, a message saying “Content does not exist” will display.

2.2.2 The report has been processed

This flow starts after step 3 in Basic Flow, when the report has been processed earlier by another admin, but the current user has not refreshed the reports list to see the update.

In this flow, a message saying “The report has been processed!” will be displayed, and no action is taken.

3. Special Requirements

3.1 Content deleting time

The system must take at most 1 second to delete the comment, and at most 5 seconds to delete a song.

4. Preconditions

4.1 Admin account logged in

The admin must have logged in an **Admin** account.

4.2 The admin has accessed the “Manage reports” section

Before starting step 1 in the Main flow, the admin has already gone to the **Manage reports** section to view all reports.

5. Postconditions

5.1 The content is deleted successfully

The content is successfully removed from the system, and a message will be displayed.

5.2 Show notification when the action is not activated

In some cases when the action can not be activated (as mentioned in **Alternative flows**), a message displays.
