Use-Case Specification: Manage Playlists

1. Use-Case Name: Manage Playlists

1.1 Brief Description

This use case allows the User to access their personal Music Hub to view, search, create and manage their music collections. The interface provides a central dashboard for accessing specific playlists that the user will name for it. That playlist will store music for the user. “Favorites” tab is a special playlist which is used to store the user's favorite songs.

2. Flow of Events

2.1 Basic Flow

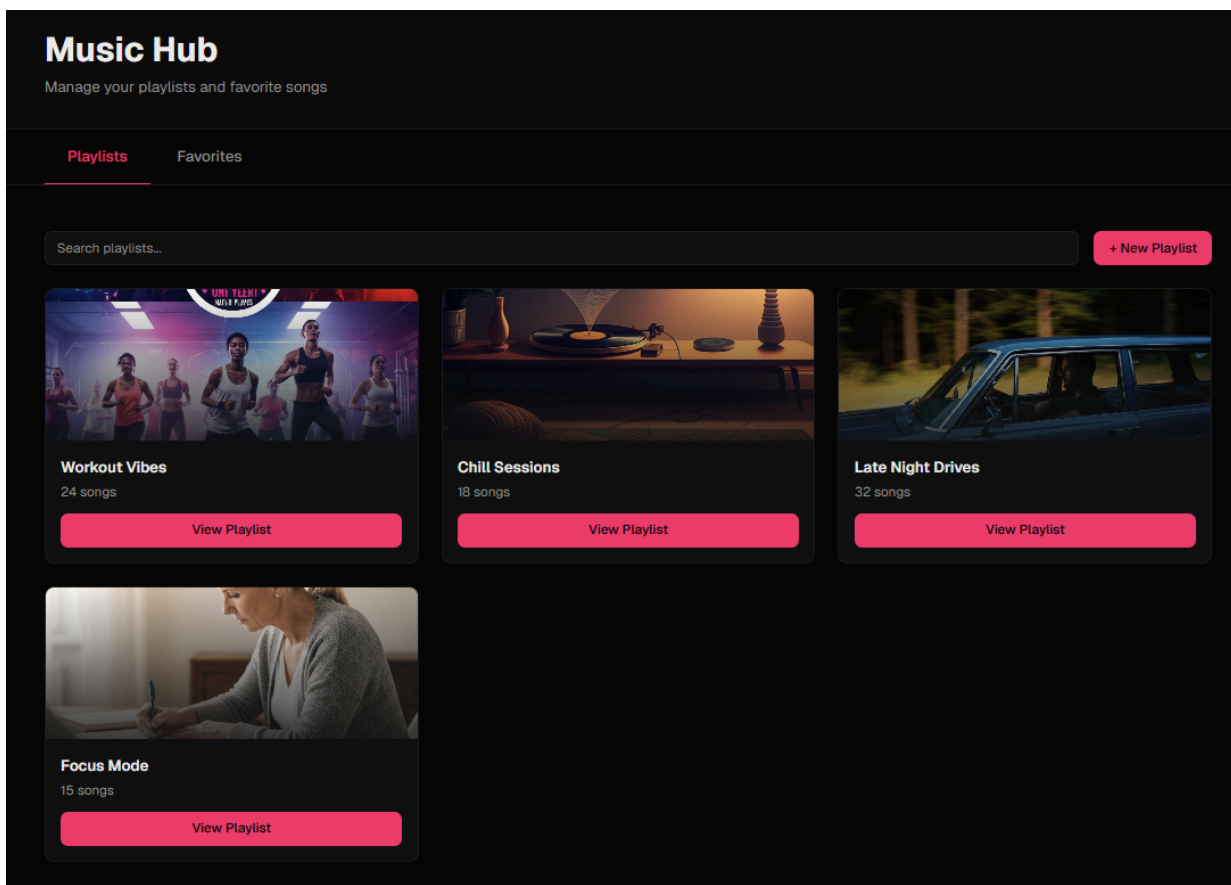

Figure 1: The interface of Manage Playlists

1. The system displays the Music Hub screen with the “Playlists” tab active by default and “Favorite” tab inactive, active hover only when the user presses it . The system will show the search bar for users to find a playlist and a button “+ New Playlist”.
2. The system retrieves and displays a grid of existing playlists. Each playlist card includes:
 - Playlist Cover Image.
 - Playlist title
 - Song Count
 - A “View Playlist” action button.
3. The user browses the available playlists.

UC ManagePlayLists	

4. The user clicks the “View Playlist” button on a specific playlist card.
5. The system navigates the Actor to the detailed view of that specific playlist.

2.2 Alternative Flows

2.2.1 Create New Playlist

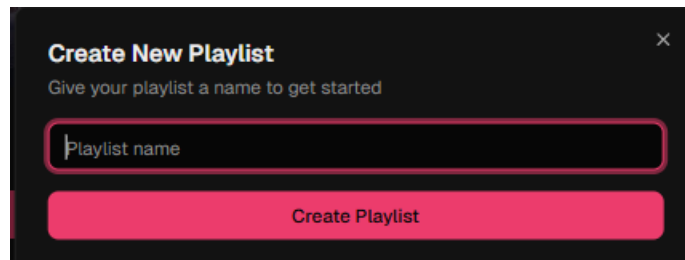

Figure 2: The interface of creating a new playlists

- At step 3 of the Basic Flow, the User clicks the “+ New Playlist” button located in the top right corner.
- The system opens a modal or new form to enter playlist details (name).
- Once created, the System adds the new playlist to the grid and displays a success message.

2.2.1.1 Limited Playlist

Normal Users only create 5 personal Playlists. If there are 5 playlists now, the system will display a message that “User has reached it limit”.

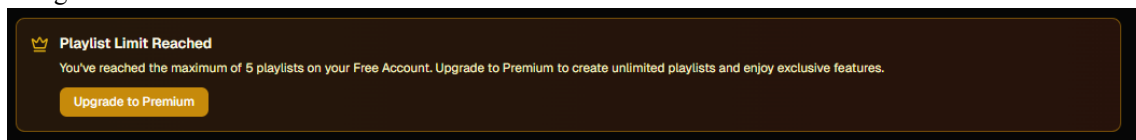

Figure 3: Message of reach 5 playlists

2.2.2 Search for a playlist

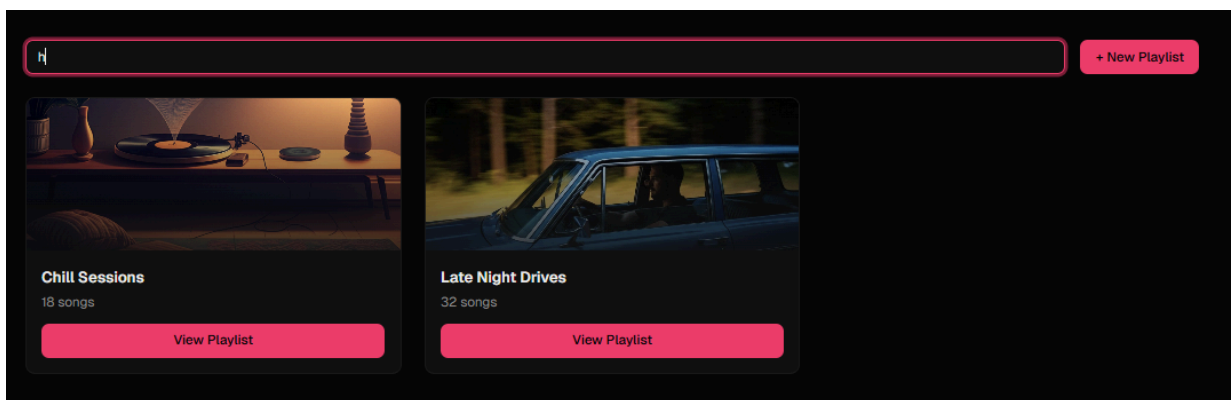

Figure 4: Search for playlist

- At step 3 of the basic flow, the User clicks into the search bar labeled “Search Playlists...”.
- The User types keyword (Example: Night).
- The System filters the grid in-real-time to show only playlists matching the criteria (Example: showing “Late Night Drive” or any related to “Night” keyword).

2.2.3 No Playlists Found

If the User searches for a term or keyword does not exist, or if the user has no playlists:

Melody Dive	Version: 1.1
Use-Case Specification: Manage Playlists	Date: 15/11/2025
UC ManagePlayLists	

1. The system displays an empty state message (Example: “No Playlists found”).
2. The system keeps the “+ New Playlist” button visible to encourage creation.

2.2.4 Remove a playlist

At step 3 of the Basic Flow, the User hovers to a playlist which he/she wants to remove. The system will pop up “Edit” choice, “Share” choice and “Delete” choice (in red)

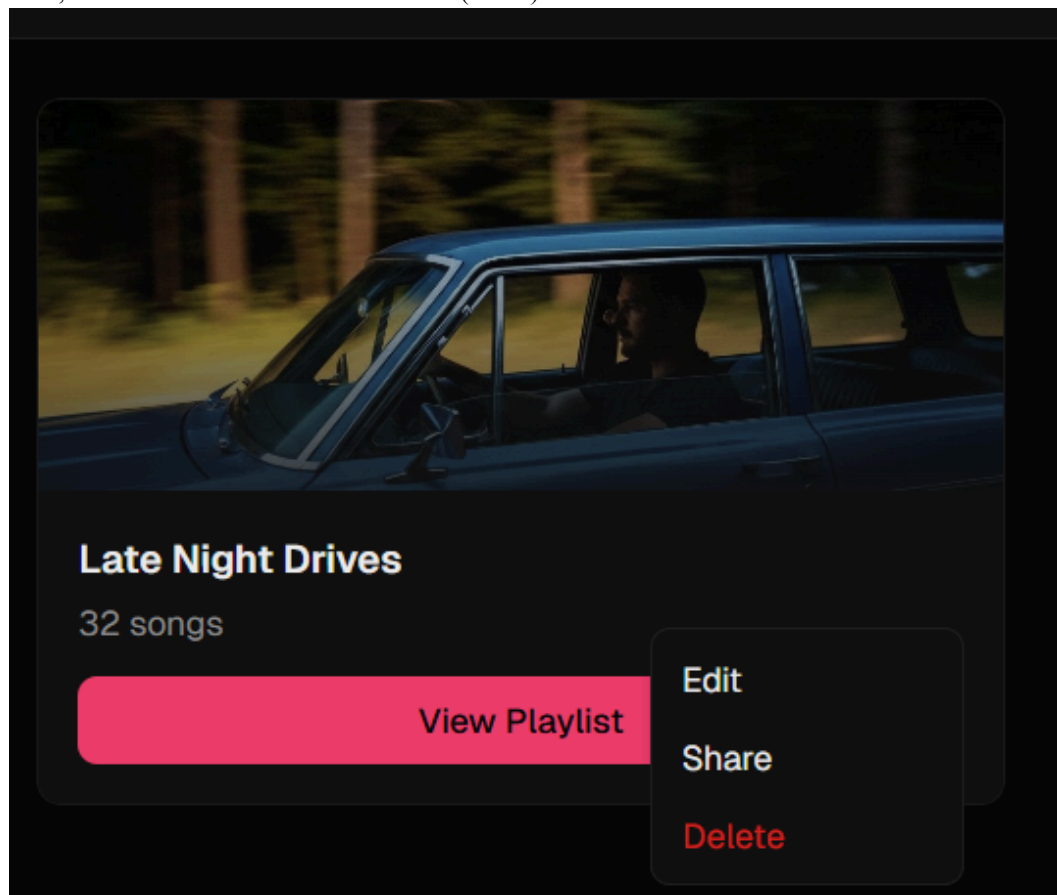

Figure 5: Playlist choice

If the user clicks on “Delete” button, the system will show a message like below:

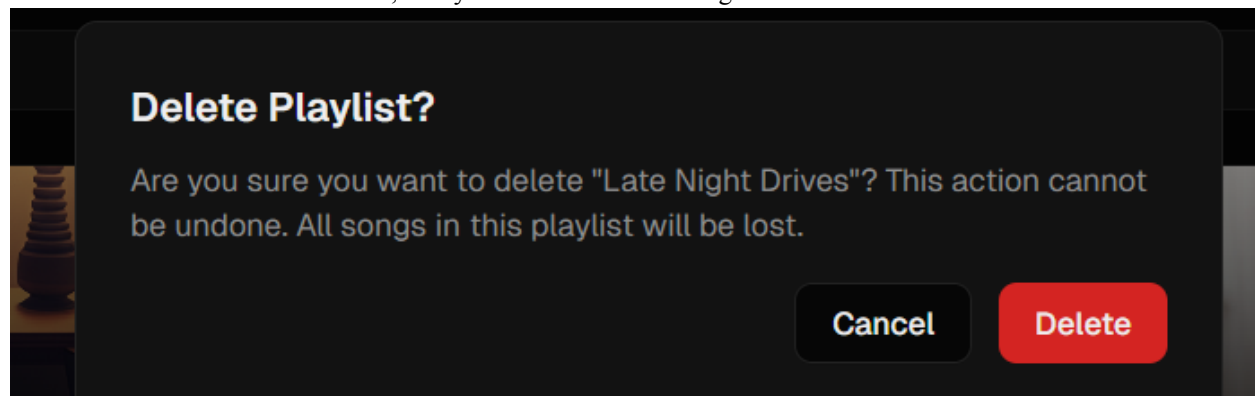

Figure 6: Delete a playlist

Melody Dive	Version: 1.1
Use-Case Specification: Manage Playlists	Date: 15/11/2025
UC ManagePlayLists	

When the user clicks on the “Delete” button one more time, the playlist will be removed from (Example: After pressing the “Delete” button, “Late Night Drives” playlist will be removed.

2.2.5 Switch to Favorite Tab

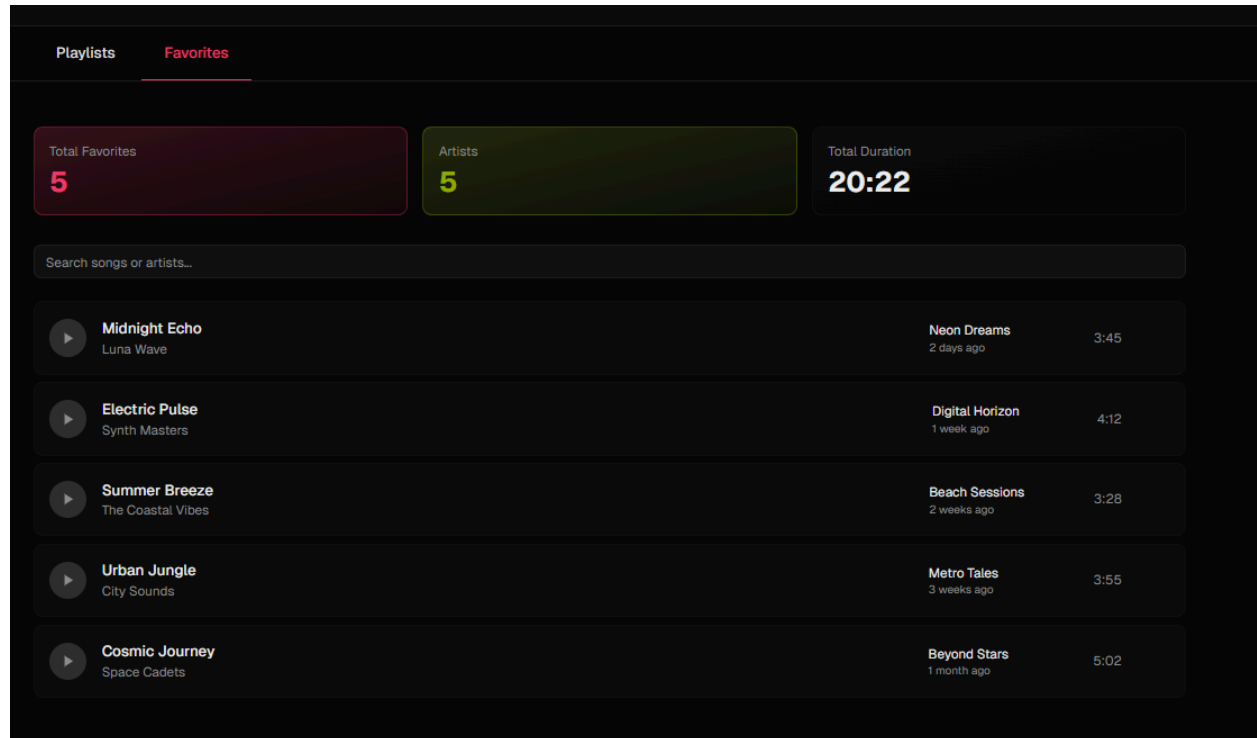

Figure 7: Favorite Tab

- At step 1, the User clicks the “Favorites” tab located next to the “Playlists” tab.
- The system changes the view to display the user’s favorite songs.
 - o The system will display the number of songs, artists, and total duration of all songs in the favorite song.
 - o The system will also display a search box for users to search for songs and list all songs in the favorite tabs.

3. Special Requirements

3.1 Card Info

Every playlist card must explicitly show the number of songs contained within it (Example: 15 songs) to give the user an immediate summary.

4. Preconditions

4.1 User Authenticated

The user must be logged into the application to access their personal “Music Hub”.

5. Postconditions

5.1 Navigation

If the Basic Flow is completed, the user is transferred to a specific Playlist detail page.
