Use-Case Specification: Play Music (Limited)

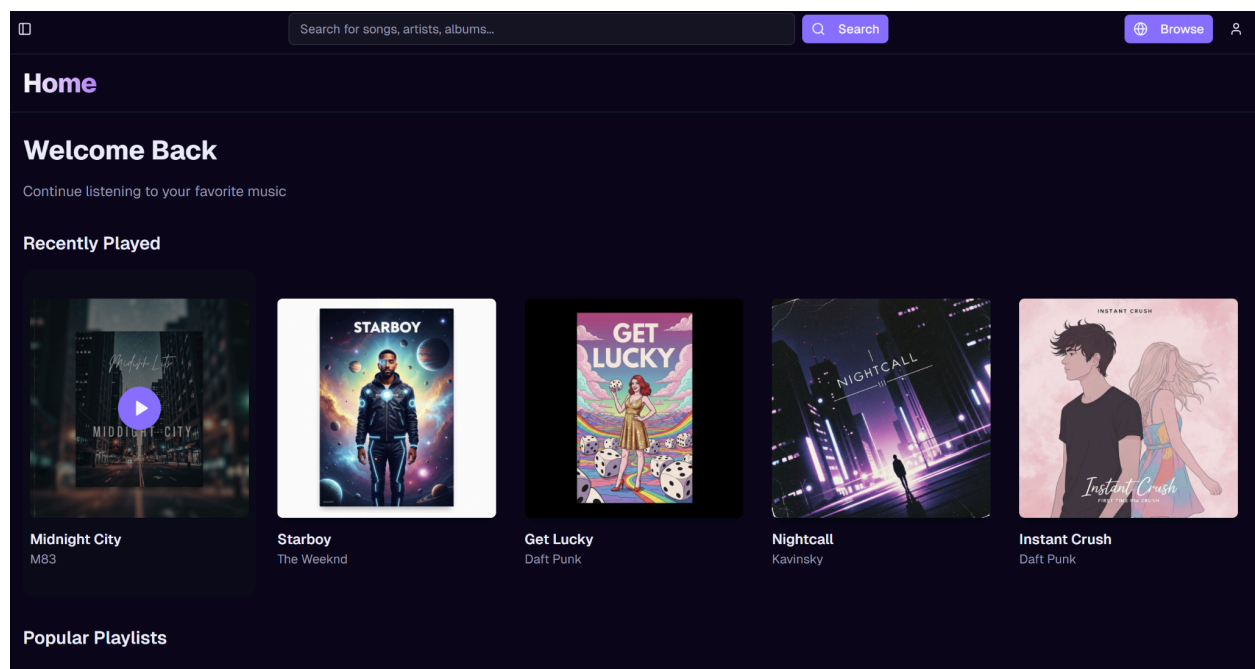

1. Use-Case Name: Play Music (Limited)

1.1 Brief Description

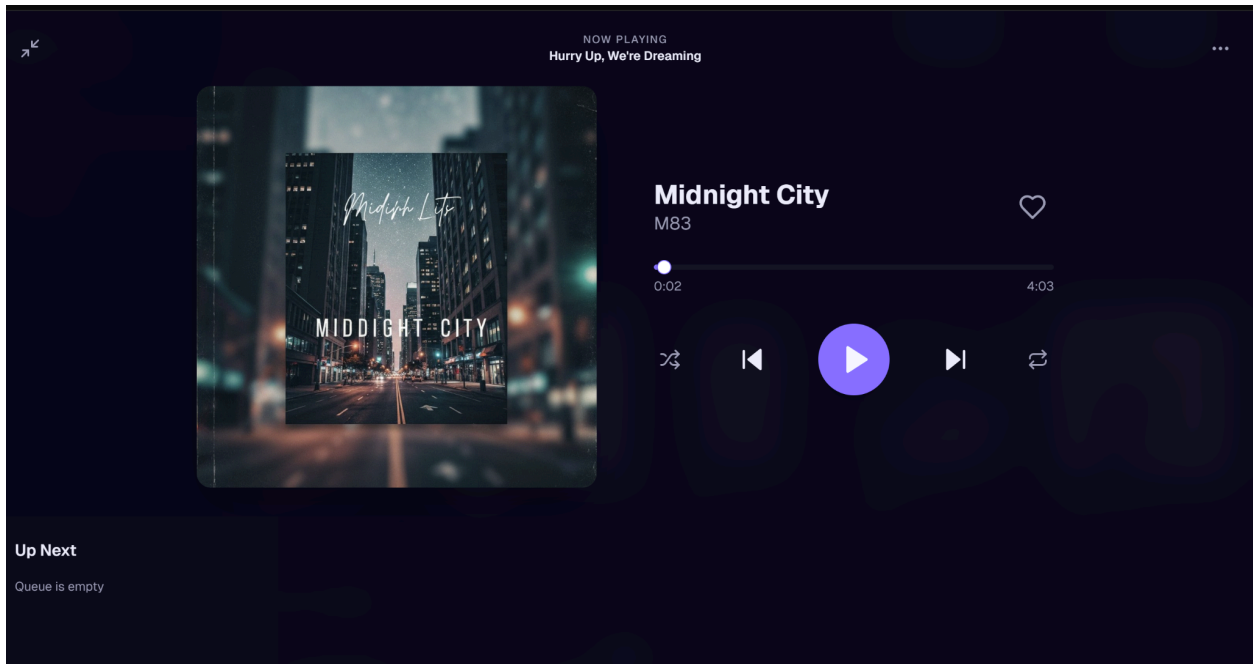

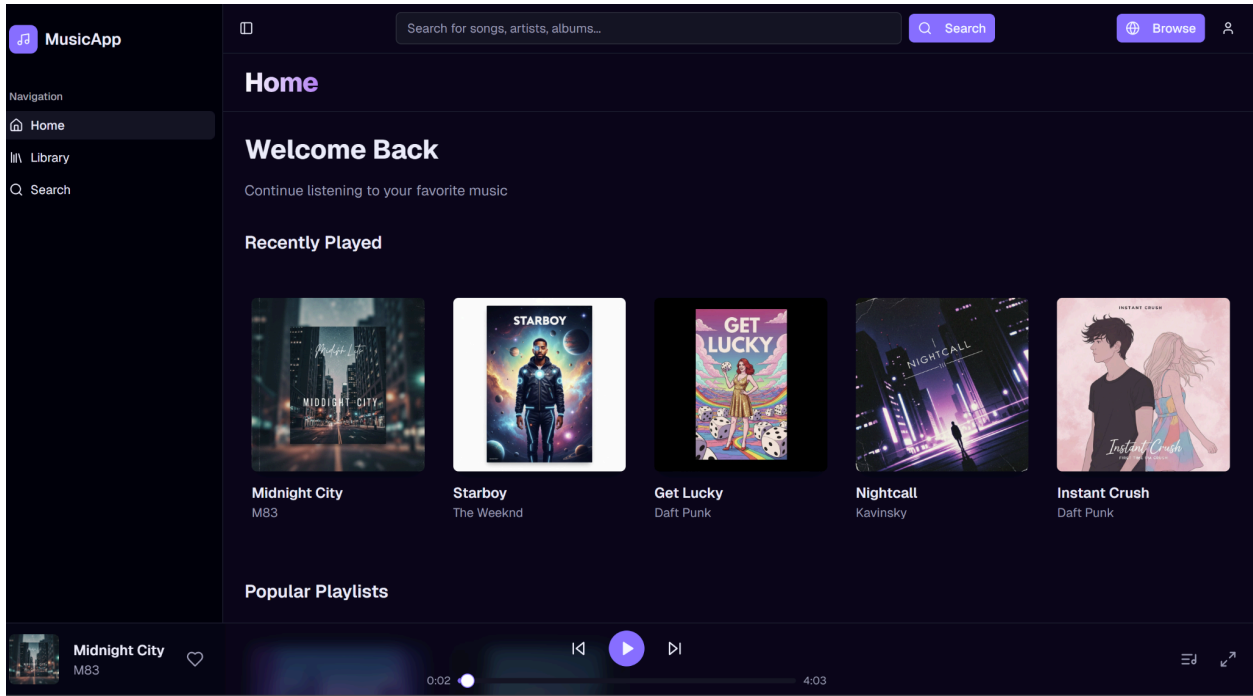

The purpose of this feature is to help users easily play music from the shared catalog directly on the website. It allows smooth playback of regular songs with basic controls like play, pause, skip, and replay, ensuring a simple listening experience. In this limited version, however, exclusive tracks are not available for playback.

2. Flow of Events

2.1 Basic Flow

Melody Dive	Version: 1.0
Use-Case Specification: Play Music (Limited version)	Date: 17/11/2025
UC PlayMusic(Limited)	

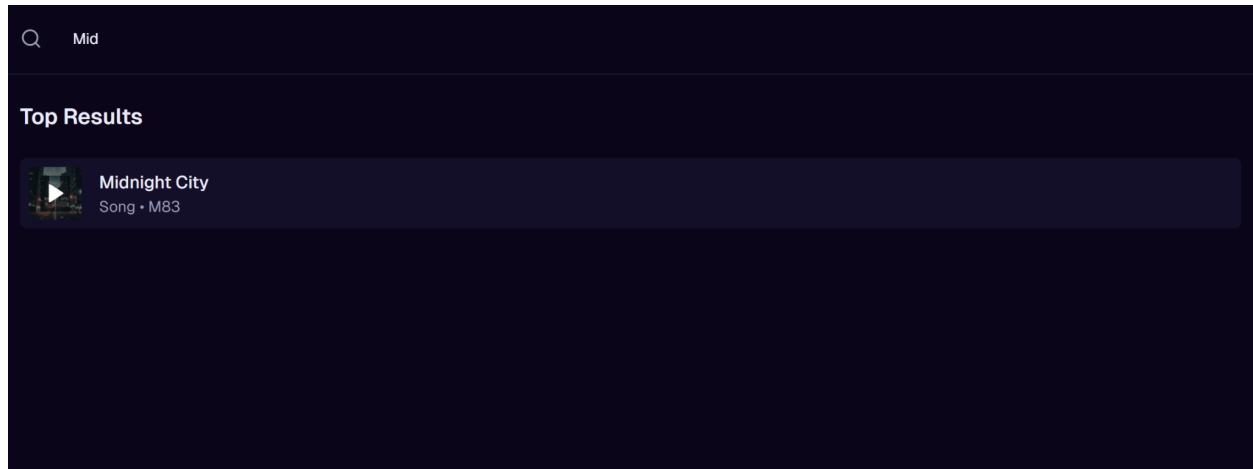

1. System shows Home / Library / Search.
2. User selects a song, album, or playlist from any screen.
3. System opens the content detail (title, artwork, Play button).
4. User taps “Play.”
5. System starts playback and shows the mini player (play/pause, progress, title) at the bottom.
6. Flow ends when user stops playback or closes the app.

2.2 Alternative Flows

2.2.1 Play from search

- At step 1, users can open Search and type a keyword.
- System shows search results (songs, albums, artists).
- User selects a result, then system opens detail page.
- User taps Play, then playback starts.

2.2.2 Auto-play next track

- Current track ends and before step 6, if the user doesn't pause the song or close the web, system automatically plays the next track in the album/playlist/queue.
- User may skip or pause at any time.

2.2.3 Track not available

- At step 4, system detects the track is unavailable (removed, region-locked).
- System shows an error and suggests similar tracks.

3. Special Requirements

3.1 Background Playback:

- Playback must not stop when switching pages inside the app.
- Music must continue playing while the user navigates to other screens within the app.

3.2 Instant Track Switch:

- When the user selects another track, playback must switch immediately without restarting the player UI.

3.3 Real-time Progress Updates:

- The progress bar must update continuously while the track is playing.

3.4 Queue Integrity:

- Playback order must follow the active queue exactly, including manual reorder or skip.

3.5 Limited songs:

- Normal users can't play exclusive songs.

3.6 Audio Session Control:

- When another track is played, the current audio session must stop cleanly before starting the next.

4. Preconditions

4.1 User Authenticated

The user must be logged into the application first.

Use-Case Specification: Play Music (Limited version)	Date: 17/11/2025
UC PlayMusic(Limited)	

4.2 Track Availability

At least the playable audio track must exist in the system (song, album track, playlist item).

4.3 Selectable Content Screen

The user must currently be on a screen where a track can be selected (Home, Search, Library, Playlist, etc.).

5. Postconditions

5.1 Active Playback Session

The selected track begins playing successfully and audio output is active

5.2 Updated Player Metadata

The player UI displays correct information for the playing track (title, artist, artwork, duration).

5.3 Queue Formation

A playback queue is created or updated base on the user's selection.

5.4 Playback Failure State

If the system cannot start playback, an error message is shown.

6. Extension Points

6.1 Like Action

- Location in the basic flow: at step 5.
- Triggered when the user taps the "Like" button while a track is playing or selected.
- The system adds the track to the user's Favorites list.

6.2 Saved to Playlist

- Location in the basic flow: at step 5.
- Triggered when the user chooses "Add to Playlist."
- The system opens the playlist selection dialog and saves the track to the chosen playlist.

6.3 Lyrics Display

- Location in the basic flow: at step 5.
- Triggered when the user opens the full player and selects "Lyrics."
- The system displays synced or static lyrics if available.

6.4 Queue Modification

- Location in the basic flow: at step 5.
- Triggered when the user opens the queue and performs actions such as reordering, removing, or adding tracks.
- The system updates the queue without interrupting playback.
